**Finally! Listen to your iTunes music EVERYWHERE,  
on any audio playback device.**

**DVD neXt COPY launches an all new program.**

**August 08, 2008:** DVDneXtCOPY Inc. announces • iTurns• , the markets most mature tool to make hardware linked music - FREE. This brand new, ONE-STEP tool does not break any laws because it uses procedures not restricted by DRM\*. DVDneXtCOPY iTurns is available in a complete **free version**.

### **What is iTurns?**

iTurns software is a virtual program that emulates a CD recorder in your computer system. A built in encoder can transcode any burn job to a freely portable mp3 music file. Just burn your iTunes music and create a freely portable music library. iTurns will do automatic iD3 tagging on the fly, which allows information such as the title, artist, album, track number, or other information about the file to be stored in the file itself. Just create your freely portable library and import to any new computer system, mobile audio device or music player.

### **Freedom from any copy-protection audio formats.**

Create your own "free library" and move it anywhere without the message "you are not allowed to play this audiofile on this system".

Do not worry about your iTunes files when you transfer to a new computer! Do not worry about Windows media Files and lost license files when you transfer to a new computer or reformat your hard drive. iTurns enables you to make your iTunes mobile and listen to your audio files wherever you want and on the computer YOU want.

## **Two Versions**

The **Free version** is for everyone to download so they can see how easy the program works. However, it has limited features such as, it cannot burn to CD and has limited conversion formats. We also do not offer support on the free version.

The **PRO version** comes packed with features such as a built in burn engine for burning your songs to CD. It also converts to multiple formats and we offer 100% support on the pro version.

Read more information about the new DVD neXt COPY iTurns at <http://www.dvdnextcopyiturns.com>

\*Digital Rights Management (DRM) is a copy protection technology that is designed to restrict the illegal distribution of copyrighted music. Forms of control can include restrictions on the use of certain music players, how many times a purchased music file can be burnt to CD or the number of computers it can be transferred to.

**NOTE TO EDITORS: Please let us know if you have questions or would like any additional information. You can find additional materials available to the press here:**
